3D Systems Supports Redfish Instruments' New Apple Enabled Multimeter

- Quickparts® Provides Complete Solutions From
Prototype Through Production -

Rock Hill, South Carolina – October 26, 2011 - [3D Systems](#) Corporation (NYSE: DDD) announced today that [Quickparts](#)® supported Redfish Instruments through its design and development of a new and innovative iDVM digital Multimeter, controlled entirely through a downloaded mobile application.

Redfish Instruments' (www.redfishinstruments.com) new iDVM device is the world's first Apple iPhone, iPad, and iPod-touch enabled digital multimeter, which wirelessly transmits voltage, current, and resistance measurements back to the user. Control of the iDVM is handled remotely by a free, downloadable application that resides on the mobile device. Redfish is currently the only company offering a multimeter iPhone app.

While designing the enclosure for the iDVM device itself, Redfish was able to benefit from the full range of solutions provided by Quickparts®. After placing separate orders for [SLA](#)® [prototypes](#) and pre-production [cast urethane](#) parts, Redfish selected Quickparts® to produce its [production tooling](#) and deliver production quantities of [injection molded parts](#).

"From the personal follow up on our prototypes through the design for manufacturability analysis we received, Quickparts® was the logical, user-friendly choice to handle all of our requirements," said Patrick O'Hara with Redfish. "We couldn't have done it without the great teamwork we experienced with Quickparts®."

About 3D Systems Corporation

3D Systems is a leading provider of 3D content-to-print solutions including 3D printers, print materials and on-demand custom parts services for professionals and consumers alike. The company also provides creative content development, design productivity tools and curation services and downloads. Its expertly integrated solutions replace, displace and complement traditional methods and reduce the time and cost of designing new products by printing real parts directly from digital input. These solutions are used to rapidly design, communicate, prototype and produce functional parts, empowering its customers to create with confidence.

More information on the company is available at www.3DSystems.com.
